Fixing page performance

We need **data** to fix this problem.

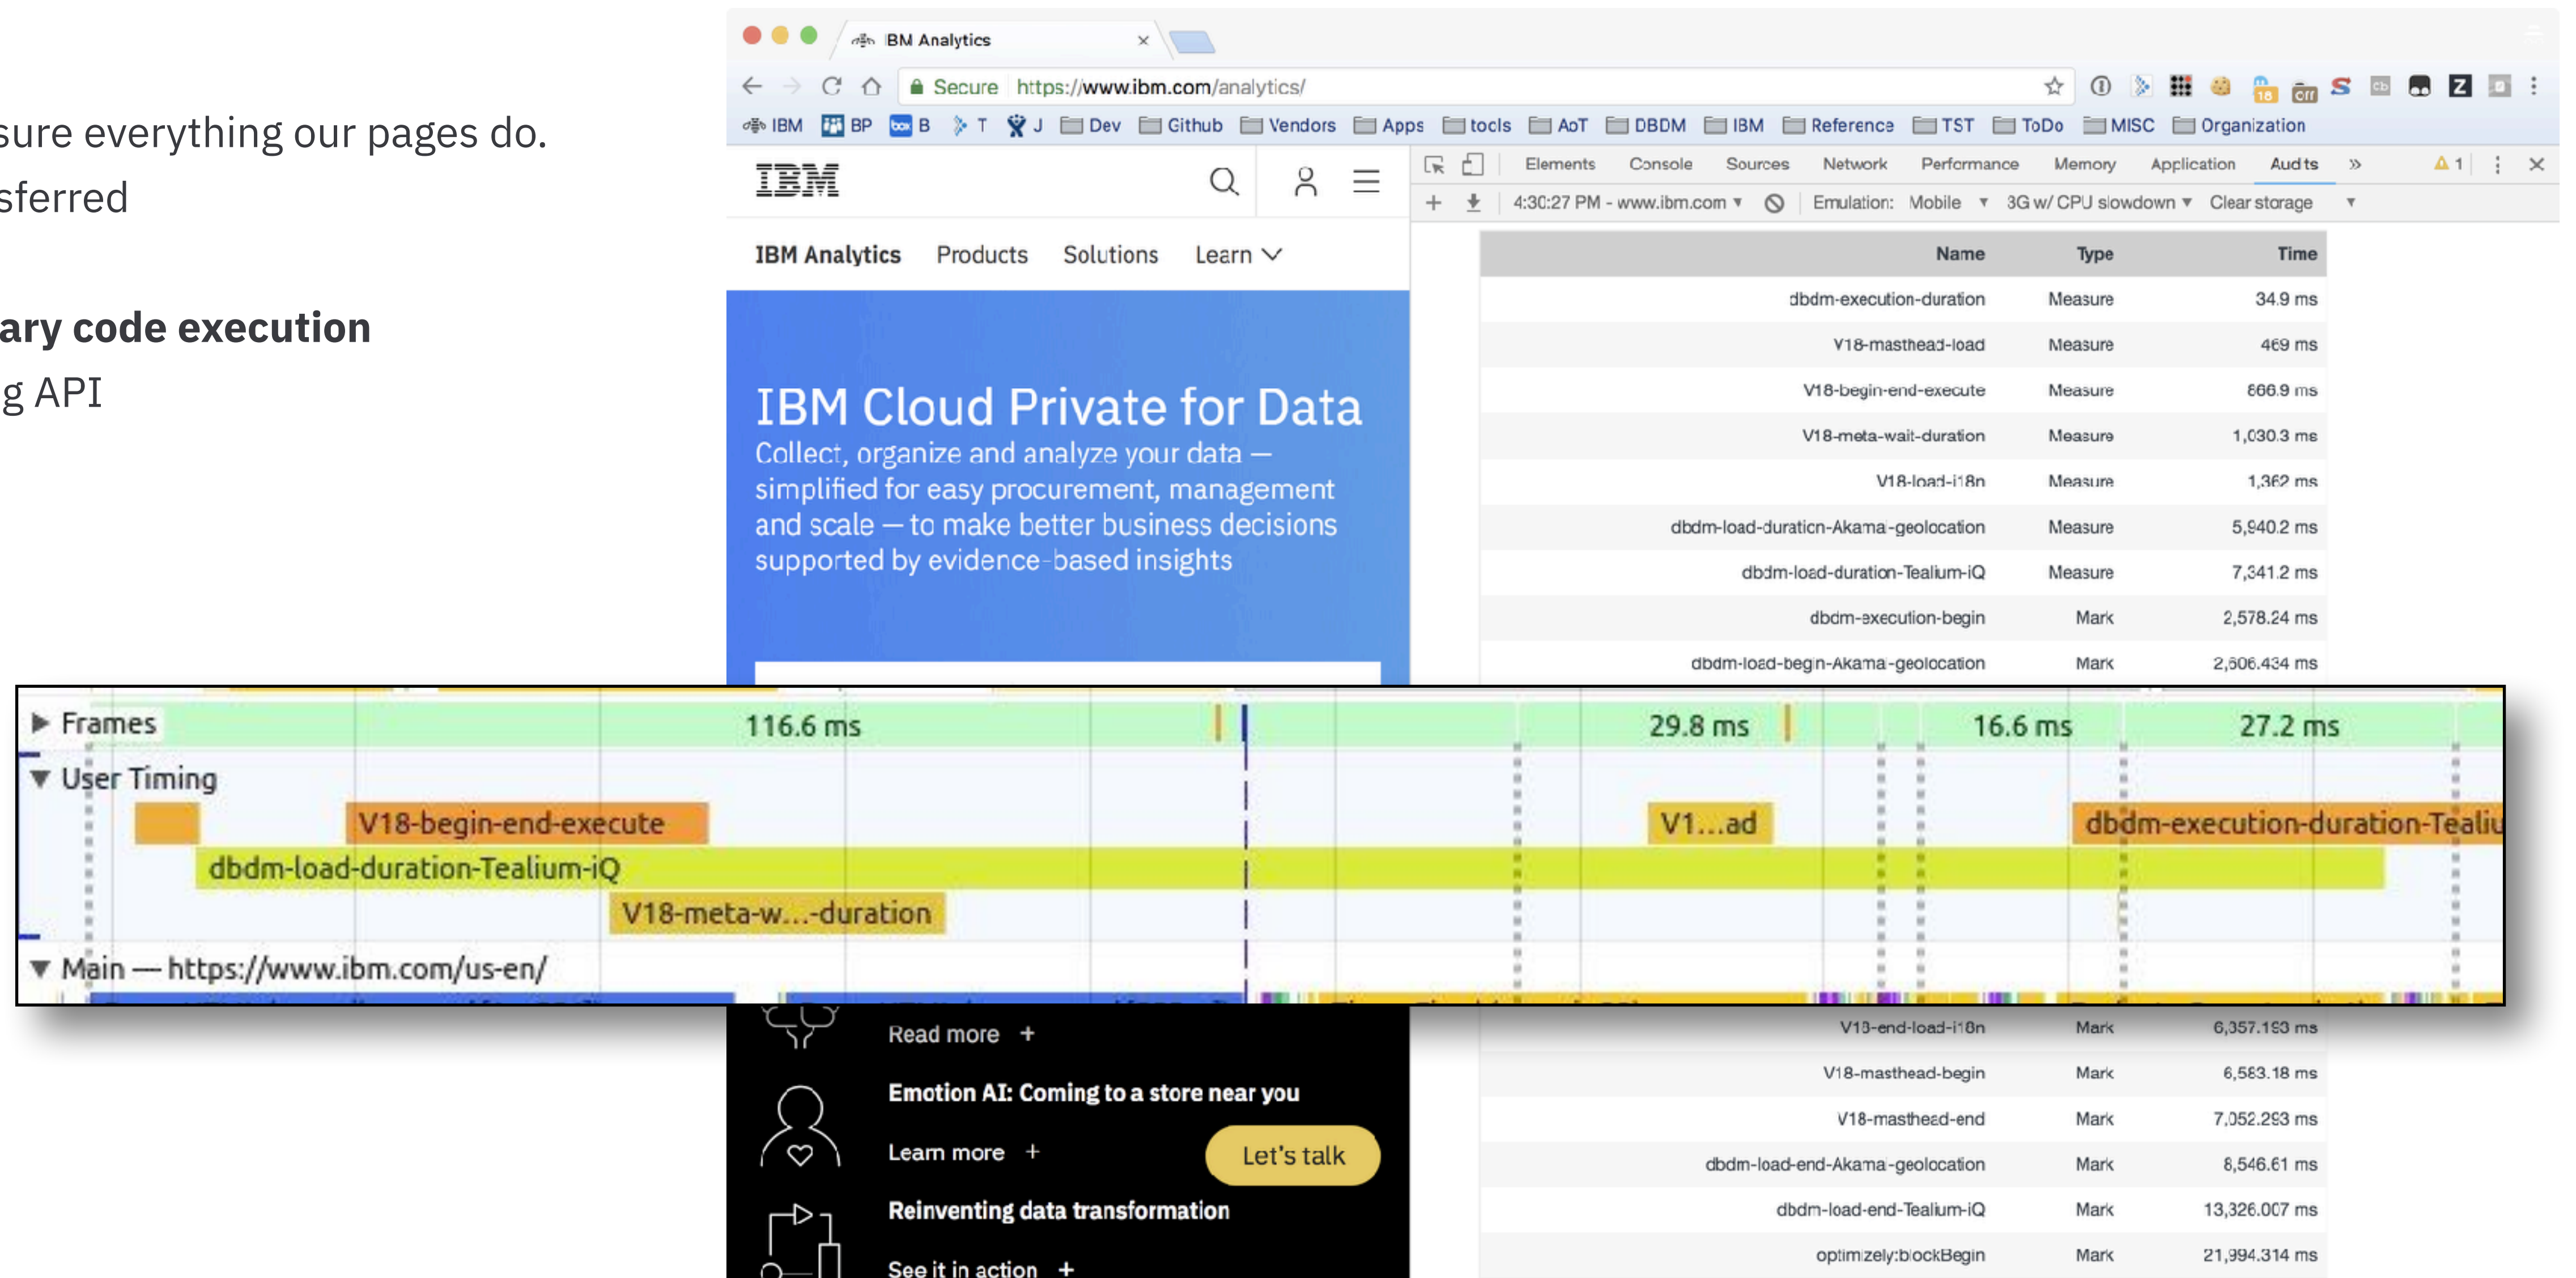

Mozilla fixed slow Firefox startup with **data**.

Fixing page performance

We can measure everything our pages do.

- Bytes transferred
- Events
- **Any arbitrary code execution**
- Web Timing API

Fixing page performance

Until we capture **data** to understand the problem, we cannot solve the problem.

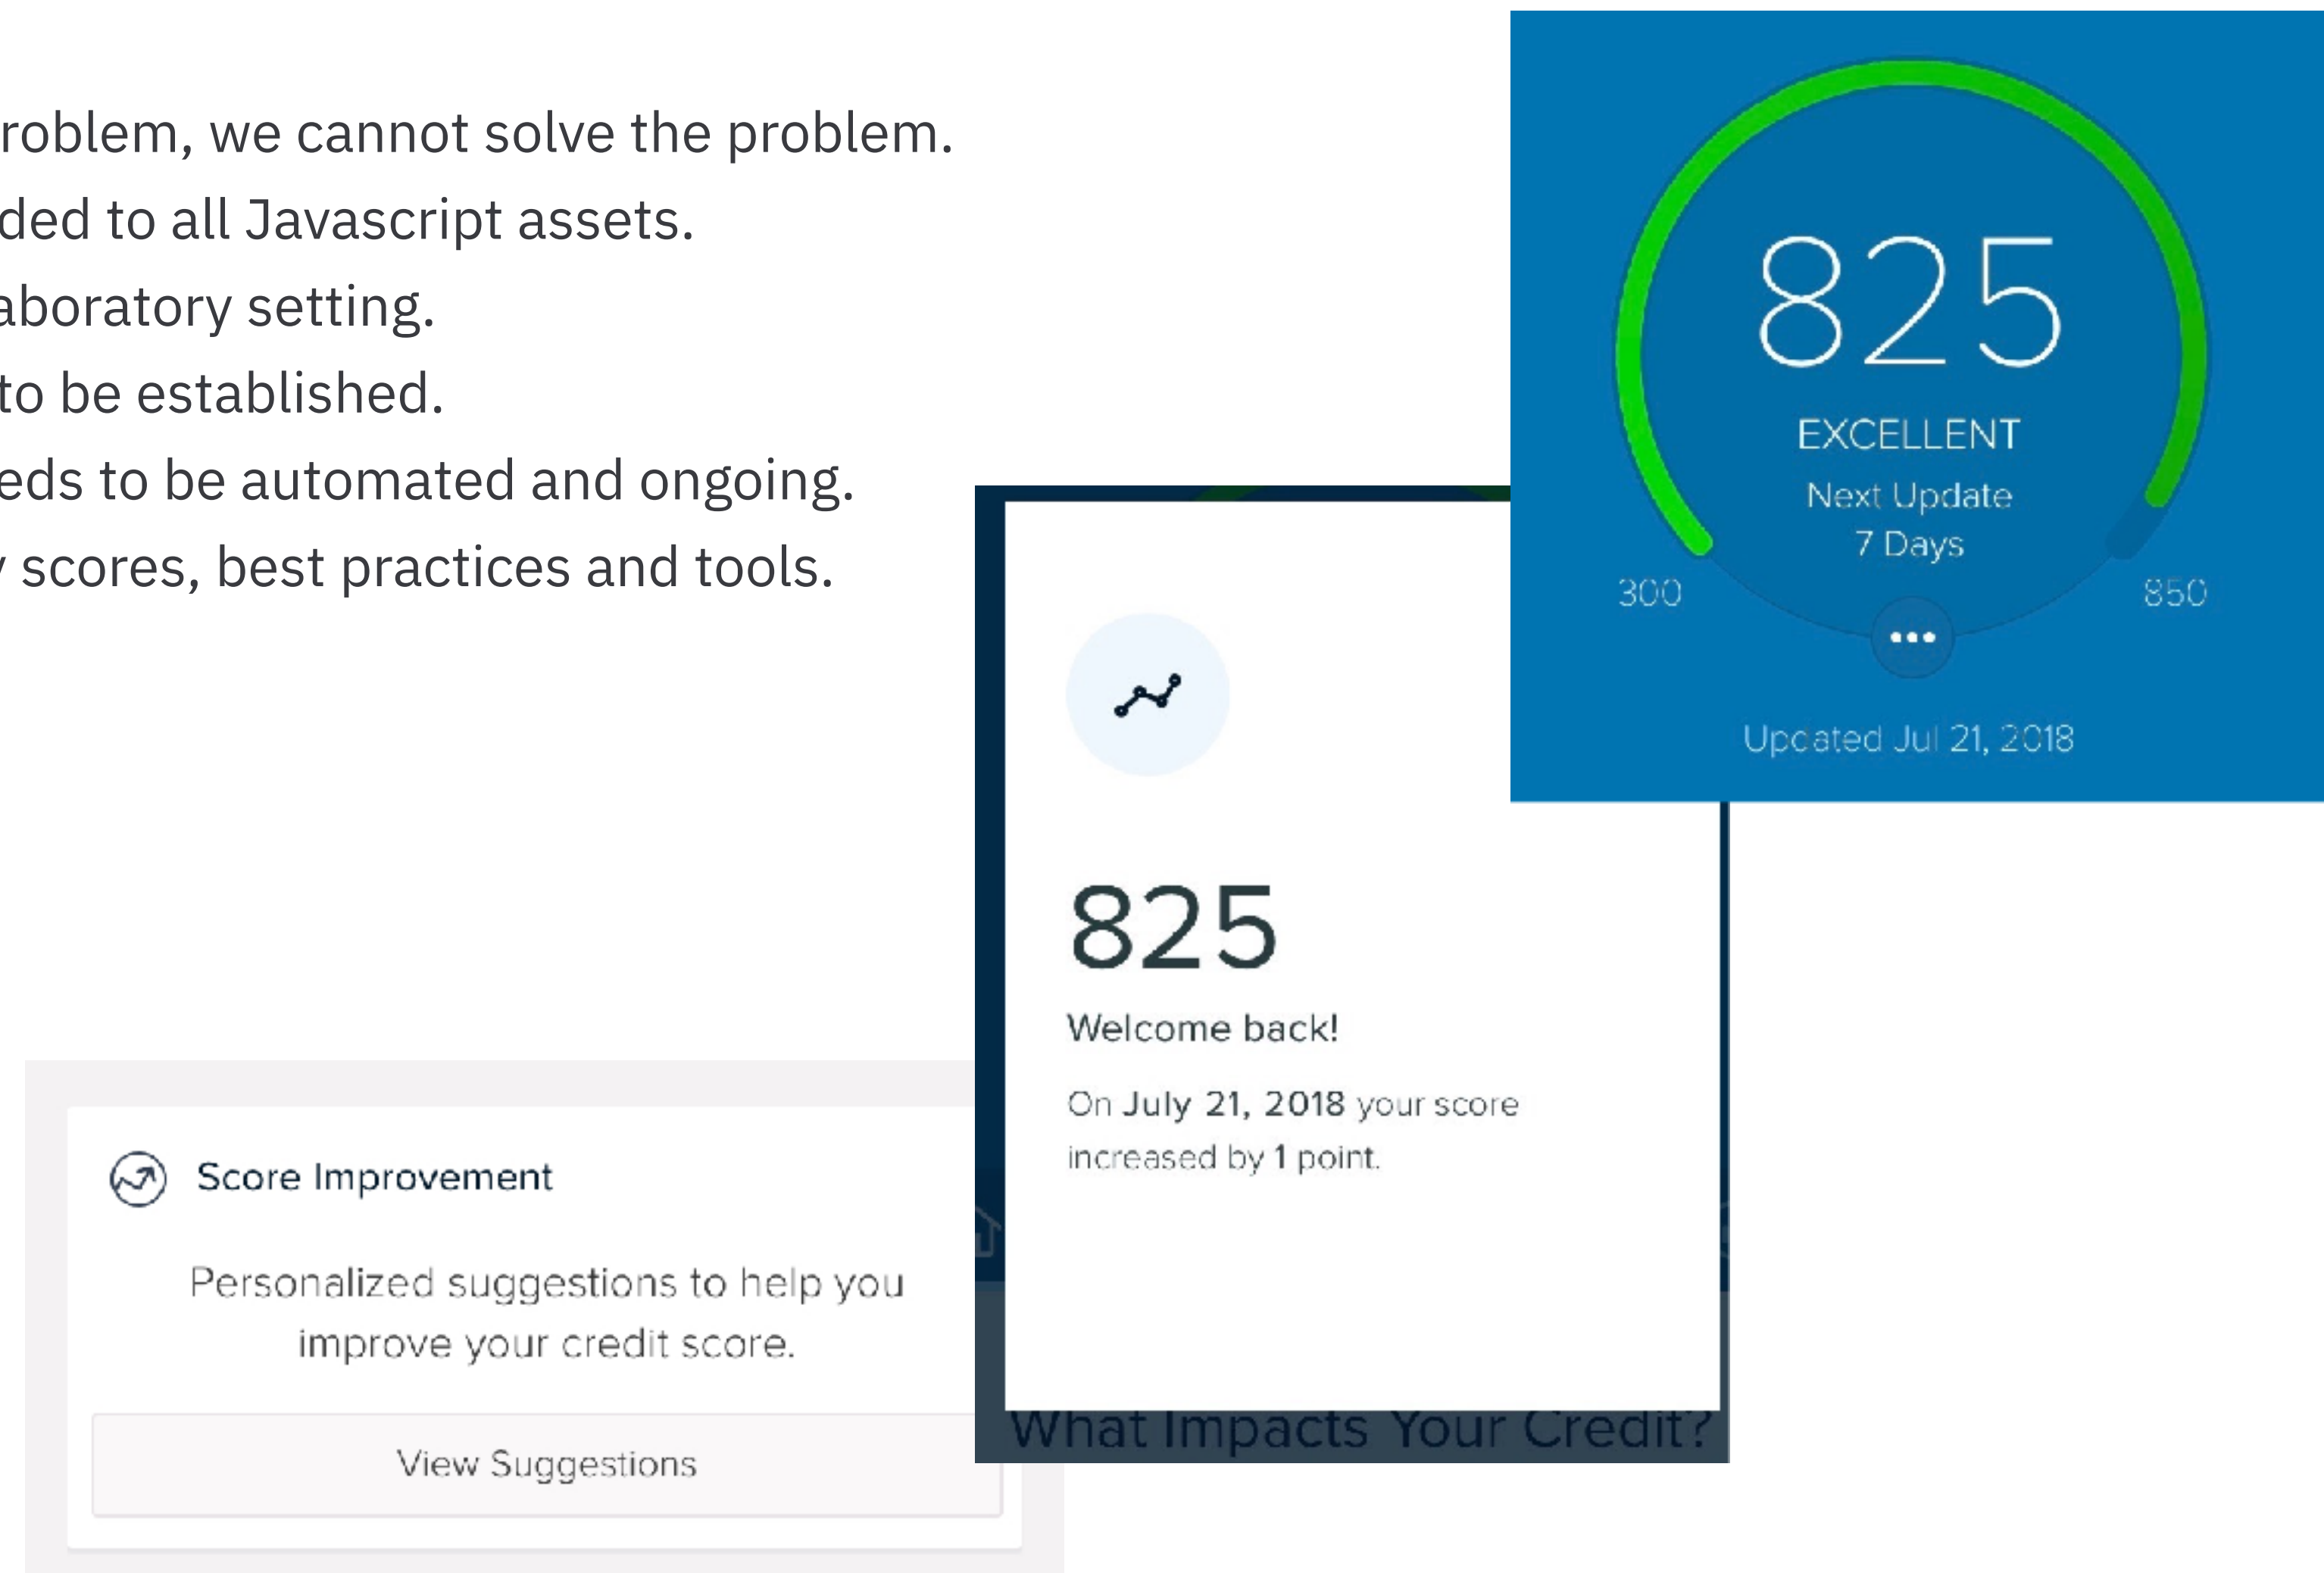

More marks and measures need to be added to all Javascript assets.

Testing and analysis needs to be done in laboratory setting.

Baseline scores and measurements need to be established.

Not a one-time exercise, this approach needs to be automated and ongoing.

PageLab will include SEO and accessibility scores, best practices and tools.
